

OVERVIEW

Metrix Low Pressure cable seals prevent oil wicking with proximity probe sensors in rotating equipment. The seals include a grommet that provides a tight seal and also allows adjustment of the cable position.

The split grommet on the Metrix Low Pressure Feed Through fits over the cable where access to the cable ends isn't practical. Tightening the fitting compresses the grommet, forming the seal. To adjust the position of the cables in the seal, simply loosen the fitting to decompress the grommet and pull the cable through the grommet to the desired position and retighten the fitting.

Note:

- Plugs are provided to fill unused holes in split grommets (4)
- Insulated leadwires must be used; do not use bare stranded wires
- Wires must be oil sealed on sensor end
